

FOR IMMEDIATE RELEASE

L.B. Bohle's High-Efficiency Bohle Tablet Coater (BTC) Reduces Processing Times up to 35 Percent for Pharmaceutical Manufacturers

WARMINSTER, Pa. (Feb. 2, 2010) — L.B. Bohle has developed the future of tablet coating, the high-efficiency Bohle Tablet Coater (BTC). The tablet coater reduces processing times up to 35 percent compared to conventional tablet coating systems, yielding significant cost savings and improved campaign efficiency while maintaining cGMP standards.

The BTC provides superior coating uniformity, producing considerably fewer rejects and using less coating material. L.B. Bohle's patented air flow bed technology eliminates spray drying, thereby reducing waste while lengthening campaigns between cleaning. It also promotes uniform tablet coating with a high-quality, defect-free film coat.

The tablet coater's elongated coating pan provides a larger tablet spraying surface accommodating up to 10 spray nozzles, which delivers more suspension solution and reduces overall coating time. The BTC's integrated mixing baffles are double-helix shaped to ensure thorough tablet mixing with gentle handling. The baffle design provides 100-percent tablet discharge, increasing campaign efficiency.

The BTC is ergonomically designed for efficient material handling and is capable of Wash-in-Place (WIP) cleaning. The BTC spray arm and nozzles are mounted on the front door assembly, simplifying inspection and maintenance.

L.B. Bohle's pharmaceutical manufacturing experts will be available at INTERPHEX 2010 (Booth 1854) to answer questions about the future of tablet coating and how the BTC can enhance pharmaceutical processing. To schedule an interview with an L.B. Bohle representative at INTERPHEX, please contact Debra Yemenijian at (610) 269-2100, ext. 224, or debray@schubert.com.

For more information about the Bohle Tablet Coater (BTC), visit <http://www.bohle-tablet-coater.com> or call (215) 957-1240.

About L.B. Bohle LLC

L.B. Bohle LLC, the U.S. subsidiary of L.B. Bohle Maschinen & Verfahren GmbH, provides high-efficiency processing technologies benefitting the pharmaceutical and nutraceutical markets, including tablet coating, milling, granulating, blending, material handling and weighing equipment. With 30 years experience and more than 35 patents worldwide, L.B. Bohle continues to innovate technology that meets the challenges of the pharmaceutical industry, making the company one of the world's leading manufacturers of pharmaceutical processing equipment. For more information, visit www.lbbohle.com or call (215) 957-1240.
